mode? To make better use of the device, you can use two different display resolutions: 1x and 2x. Screen resolution is usually referred to as 'DPI'. This stands for 'dots per inch', or the number of pixels in a single line. The higher the number, the finer the picture. The lower the number, the more crisp it will look. When you switch on the device, you will find these two options in your Settings > Display > Display Resolution. It doesn't matter if the device has a 2x display. You can have a 1x display and then set the menu and other settings to look better with a 2x display. You can then switch back to the 1x display for a better experience and use the larger screen space. Some games require a specific screen resolution, but not all. You may find that there is a setting to choose between different screen resolutions.
