Read on to learn more about the newest release of RedHat's leading enterprise operating system! Red Hat Enterprise Linux is an IT software company that specializes in development and distribution of the open source enterprise linux operating system designed for corporate use in large organizations. It is a leading enterprise Linux vendor. Red Hat was founded in 1993 in Raleigh, North Carolina by Bob Young and Earl Shorris. In 1997, Red Hat developed the product named SuSE Linux, which has since become one of the world's most popular open source distributions. Red Hat has since built its reputation on developing and delivering enterprise-grade Linux solutions to customers worldwide. In 2007, Red Hat and IBM announced a strategic partnership under which IBM would use the Fedora and later RHEL source code for its own products; this enabled an open market that benefited both companies with more choice for users and resellers alike. In 2008, Red Hat was listed on the S&P 500 as a top performer in both earnings and stock price growth. In 2010, the company acquired open-source system management software maker ManageIQ for $175 million; IBM, Google and Oracle filed an amicus brief opposing Oracle's acquisition in May. In September of that year, Red Hat became a member of the Hybrid Cloud Standards group in a bid to drive adoption of its own cloud management tools in Amazon EC2 and other public clouds.
